FREE

Three AI Versions of Me, One Voice Clone

How I turned my own ElevenLabs voice clone into a posh Brit, a robot and a cartoon, step by step, with what it costs.

The coffee is real. Promise. ↗

[START HERE →](#)

WHAT YOU'LL MAKE

One voice, three characters

Short video. You, plus three AI versions of you.

In the video I talk as myself, then three AI versions of me answer back: a posh British Seda, a robot Seda and a cartoon Seda.

All three speak with my own voice clone. Each one starts from a real frame of my room, gets a makeover, then gets lip-synced to its line. The coffee stays real throughout.

1 • Voice

ElevenLabs Text to Speech with my own voice clone

2 • Look

Nano Banana 2.1 changes the frame: outfit, robot parts or cartoon style

3 • Mouth

OmniHuman 1.5 animates each still from its audio

4 • Edit

Cut it together with your real clips

Not the Voice Changer. More on that later.

WHAT YOU NEED

Accounts and costs

Plans checked on 18 October 2026. They change a lot, so check again.

ElevenLabs

The Free plan (10,000 credits) doesn't include voice cloning. Instant Voice Cloning starts on the Starter plan. Professional Voice Cloning starts on Creator. No price here on purpose: it changes, so check the pricing page.

Nano Banana

Google's image editing model. You can reach it in the Gemini app. I used version 2.1. Free limits vary, so check your account.

OmniHuman 1.5

ByteDance's lip-sync model. One place to use it is Dreamina by CapCut, which gives daily free credits. Paid credit packs if you need more.

Your footage

A clip of you talking in good light, plus any video editor.

Budget tip: write your lines before you spend credits.

STEP 1

Clone your own voice

Your voice, with your consent. Not your friend's. Not a celeb's.

- 01 Record** About 1 to 2 minutes of clear speech. No music, no echo, no background noise. ElevenLabs says going over 3 minutes doesn't help much.
- 02 Open Voices** In the ElevenLabs dashboard, go to **Voices** in the left menu and click the **plus** icon.
- 03 Pick Instant Voice Clone** Choose **Instant Voice Clone**, upload your recording and give it a name. Mine is called Sedosh.
- 04 Confirm consent** Tick the box confirming you have the right and consent to clone this voice. Then save.

Talk like you talk

Read in your normal voice. The clone copies what you give it, mumbles and all.

STEP 2

Make posh and cartoon Seda

Text to Speech, my clone, Eleven v4.

Audio tags do the acting.

- 01** Open **Text to Speech** and pick your clone as the voice.
- 02** Set the model to **Eleven v4**.
- 03** Paste a line, generate, listen. Generate a few takes and keep the best.

POSH BRITISH: PASTE INTO TEXT TO SPEECH (select + copy)

[posh British accent] Oh, lovely. She sounds like she owns a house in Kensington.

CARTOON: PASTE INTO TEXT TO SPEECH (select + copy)

[excited] [playful] Oh my God. Why do I suddenly sound like I'm about to go on an adventure with a talking toaster?

My notes don't have my exact tags. Start here and tweak.

STEP 2B

The robot is a cheat

Honest bit: ElevenLabs didn't make the robot sound. A vocoder did.

For robot Seda I generated the line with my clone on **Eleven v3**, with no robot settings. Then I put a classic vocoder effect on it afterwards, at 75%. That effect isn't an ElevenLabs feature. Any audio editor with a vocoder or robot effect will do.

ROBOT: PASTE INTO TEXT TO SPEECH (ELEVEN V3) (select + copy)

Okay, even the robot sounds more convincing than me.

Don't go to 100%

Keep some of your real voice under the effect. At 75%, my robot still sounded the most like me of all three.

Why not Voice Changer?

I tested it. It kept my accent and delivery and only swapped the tone. Library voices just sounded like other people. My own clone won.

STEP 3

The makeovers

*Start from a real frame of your video,
at the moment the line begins.*

Grab a still from your clip, then ask Nano Banana to change only one thing. Keep your face, pose, room and light. That's what makes it look like you, not a stranger in your flat. These are starter prompts, not my exact wording.

POSH BRITISH: PASTE WITH YOUR FRAME (select + copy)

Keep this exact person, face, hair, pose, room and daylight. Change only the outfit: a dark tweed blazer over a smart shirt. Photorealistic, same camera angle.

ROBOT: PASTE WITH YOUR FRAME (select + copy)

Keep this exact person, face shape, pose and room. Add futuristic robot details: sleek metallic panels along the jaw, neck and arms, and soft glowing seams. She should still be clearly recognisable. Same camera angle.

CARTOON: PASTE WITH YOUR FRAME (select + copy)

Re-render this exact frame as a playful 3D animated movie character. Same person, same pose, same room, same mug. Big expressive eyes, soft lighting, keep the composition.

I asked for Pixar-style. The algorithm got it.

STEP 4

Make them talk

OmniHuman 1.5 turns one still and one audio file into a talking clip.

- 01** Open OmniHuman 1.5 (for example in Dreamina's avatar or lip-sync tool).
- 02** Upload the makeover image and the matching ElevenLabs audio.
- 03** Generate, check the mouth, regenerate if it looks off.
- 04** In your editor, place each clip where its line starts in your real video.

Short lines win

One sentence per character. Shorter clips cost fewer credits and break less.

Match the loudness

Level your real lines and the AI lines to the same volume, or the characters will shout at you.

BEFORE YOU POST

The honest bits

Fake voices, real rules.

CHECKLIST

- ☒ **Consent** Only clone your own voice, or someone who said yes. Same for faces.
- ☒ **TikTok** Switch on the **AI-generated content** label (usually under More options).
- ☒ **Instagram** Switch on the **AI label / AI info** in the advanced settings.
- ☒ **YouTube** Set **Altered or synthetic content** to Yes.
- ☒ **Say what it is** I write "my voice clone + Eleven v4" on screen, not "Voice Changer". Name your tools right.
- ☒ **Costs** Instant Voice Cloning needs at least the ElevenLabs Starter plan (Professional Voice Cloning starts on Creator). Lip-sync credits go fast. Check current prices before you start, they change.

Menu names move around. Look for the AI switch.

TRY IT

Your first character

Pick one personality and make one line. Then show me.

TRY IT

[whispers] I have to be honest with you. I just bought another gadget. [laughs] Don't tell anyone.

Paste it into Text to Speech with your own clone on Eleven v4. Then swap the tag for `[posh British accent]` or `[excited]` and hear how much one bracket changes.

Results may cause more gadget shopping.

Three of me. Zero new gadgets.

This month. Allegedly.

Which one did you make first: posh, robot or cartoon? Tell me 🙌
